Assignment-4

Linux System and its Applications

Systems and Storage Laboratory

Department of Computer Science and Engineering

Chung-Ang University

Assignment-4: Kernel Compile

❖ **Boot into the kernel that we just compiled**

- Change the kernel name (local version name) with your name, take a **screenshot** of the result
  - You can use `uname -r` command to print the currently running kernel version

❖ **Upload your kernel via bitbucket/Github/Gitlab + Git**

- Show us your **local** and **remote** commit log with a screenshot (**2 screenshots**)
- Do not forget to use `.gitignore` file to exclude non-source code files (e.g. `.o` object files)
  - Check out some example `.gitignore` files from <u>here</u>

❖ **Submit within <u>pdf format</u> which includes all the 3 screenshots**

- Make sure each one includes your name and student id
